Mata Kuliah : Pemrograman Sisi Server – TI – S1
Pertemuan :
NIM :
Nama :

Hasil Program :

Code Program :

Dockerfile:

```
# Gunakan base image resmi PHP dengan Apache
FROM php:8.2-apache

# Tambahkan ServerName supaya tidak muncul warning AH00558
RUN echo "ServerName localhost" >> /etc/apache2/apache2.conf

# Aktifkan mod_rewrite (opsional, sering dipakai di web project PHP)
RUN a2enmod rewrite

# Set folder kerja
WORKDIR /var/www/html

# Copy semua file project ke dalam container
COPY . /var/www/html

# Expose port 80
EXPOSE 80

# Jalankan Apache di foreground
CMD ["apache2-foreground"]
```

index.php

```
<?php echo 'Hello from PHP Web App in Docker!'; ?>
```

Build image:

```
docker build -t phpdockerapp .
```

Jalankan container:

```
docker run phpdockerapp
```
