Pertemuan 12 : No-SQL Database

1. Buat project baru latmongo :

   Isi : docker-compose.yml

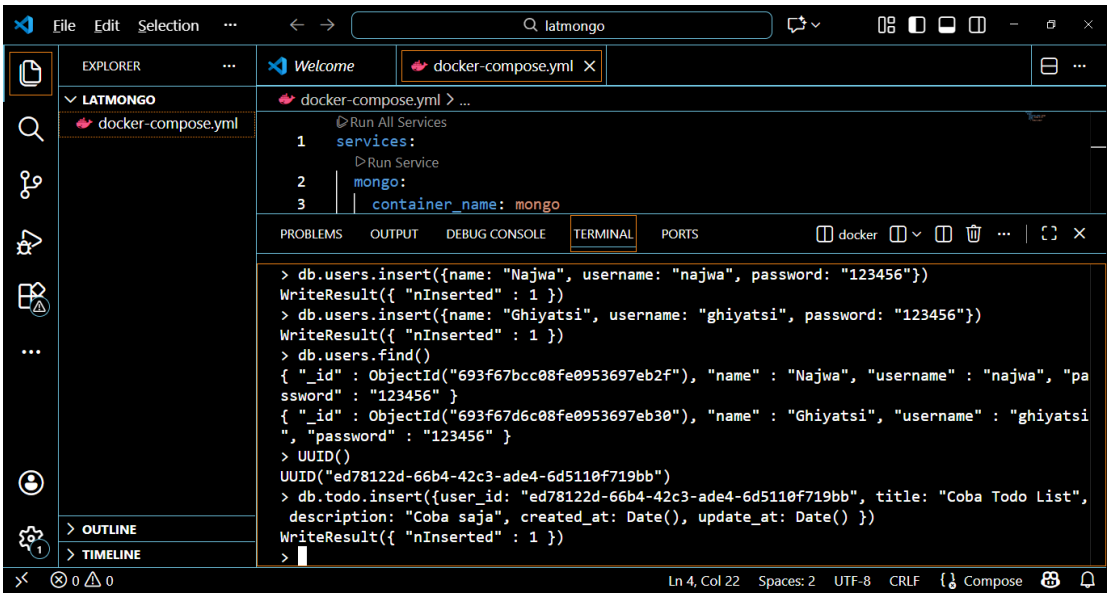

```yaml
services:
 mongo:
  container_name: mongo
  image: mongo:5.0.3
  ports:
   - 27017:27017
```

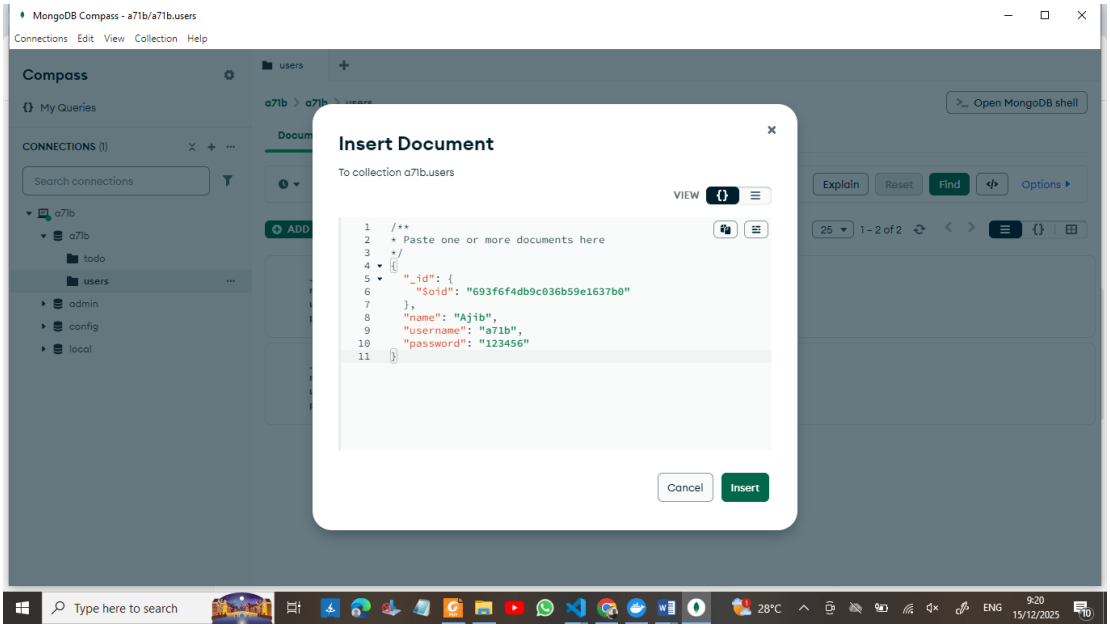

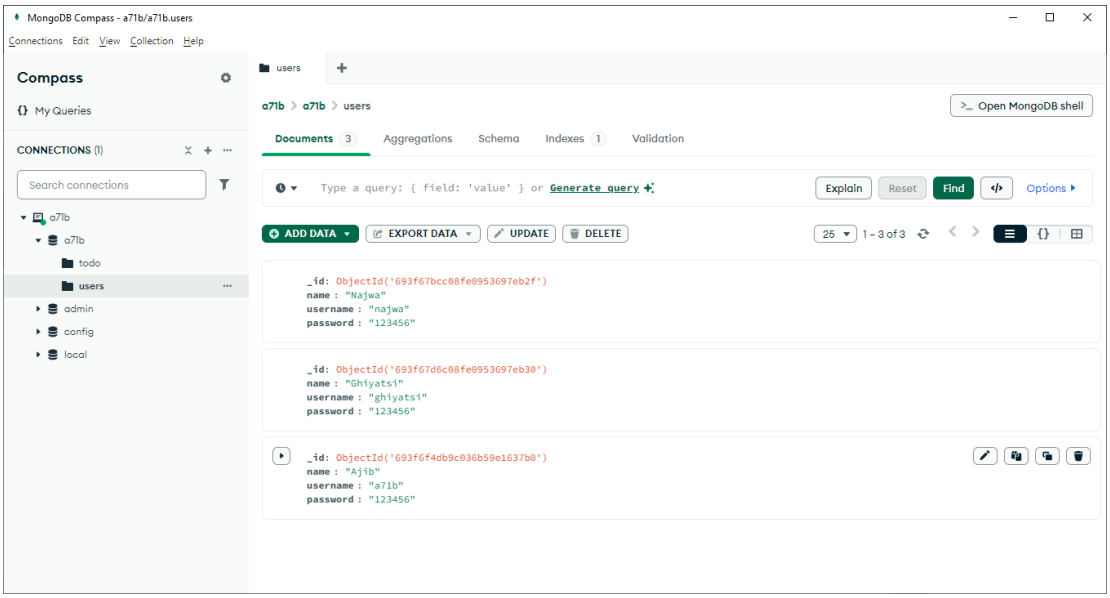

2. Masuk ke MongoDb Shell, buat database **latihan**, kemudihan tambah **users** dan **todo** seperti pada Materi 12.

   Untuk user_id gunakan fungsi UUID (Universally Unique Identifier).

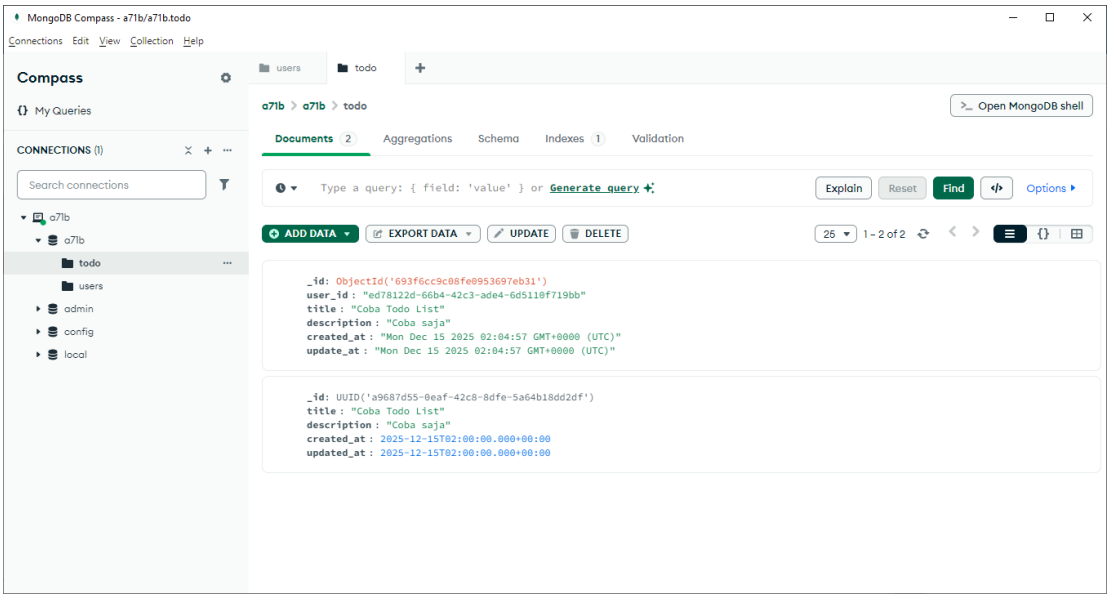

3. Gunakan MongoDB Compass untuk pengelolaan data di MongoDB seperti pada Materi 12.

MongoDB Compass - a71b/a71b.todo
